 - Protected & Reliable
-

User

The Rapiscan Orion 423HS scanning system is primarily used by security personnel, law enforcement agencies, and organizations responsible for ensuring security in various environments such as airports, seaports, border crossings, government buildings, event venues, and critical infrastructure facilities.

These systems are designed to detect and identify concealed threats such as weapons, explosives, and contraband during security screenings. Additionally, they may also be utilized by private corporations for high-security facilities or events where stringent security measures are required.
